

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	5 September 2026
Team ID	SWUID2026190414
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization:

The team used brainstorming to identify possible solutions for improving the metro ticket booking experience. Ideas were generated openly and then grouped and prioritized based on their importance and feasibility for implementation using ServiceNow.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team discussed the existing challenges faced by metro passengers during ticket booking and identified the need for a faster, accessible, and automated digital ticketing solution.

Selected Problem Statement:

Metro passengers may experience delays and inconvenience due to manual ticket booking, fare calculation, and physical ticket handling. A digital system is needed to simplify ticket booking, automate fare calculation, and provide QR-based digital tickets through ServiceNow.

Step-2: Brainstorm, Idea Listing and Grouping

The following ideas were generated and grouped according to the major areas of the proposed system:

Digital Ticket Booking

- Service Catalog item for booking a metro ticket
- Select Starting From and Going To stations
- Select single journey or return journey
- Select number of passengers

Fare & Ticket Automation

- Automatic fare calculation
- Calculate amount based on journey and passenger details
- Generate a digital ticket after booking

QR & Digital Access

- Generate QR code for the digital ticket

- Display the QR code through a Service Portal widget
- Use QR code for verification at the metro station gate

Payments & User Experience

- Provide UPI, Card and Other payment options
- Create a simple Service Portal booking experience
- Reduce passenger waiting time and manual intervention

Data & Security

- Maintain metro station details in a custom table
- Use reference variables for station selection
- Use ACLs to control direct access to backend tables

Step-3: Idea Prioritization

The ideas were prioritized using the two dimensions represented in the template: Importance and Feasibility. High-importance and highly feasible ideas were selected as the core features of the Metro Ticket Generating System.

Idea	Importance	Feasibility	Reason for Priority
Service Catalog ticket booking	High	High	Core feature; simple for passengers to use
Automatic fare calculation	High	High	Reduces manual calculation and errors
QR code generation	High	High	Enables digital ticket verification
Station details mapping	High	High	Supports source/destination selection
Service Portal QR widget	High	Medium	Provides user-friendly QR display
Digital payment options	Medium	Medium	Supports cashless ticketing
Data analytics for passenger behavior	Medium	Low	Useful for future operational insights

Final Selected Solution:

Based on the brainstorming and prioritization, the team selected a ServiceNow-based Metro Ticket Generating System with a Service Catalog booking form, station reference mapping, automated fare calculation, QR-code digital ticket generation, Service Portal display, digital payment options, and access control.
