

Project Design Phase

Proposed Solution

Date 5 September 2026

Team ID SWUID2026190414

Project Name Metro Ticket Generating System in ServiceNow

Proposed Solution:

Project team shall fill the following information in the proposed solution template for the Metro Ticket Generating System in ServiceNow.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Metro passengers may face long queues, manual ticket-booking effort, fare calculation difficulties and dependence on physical tickets. These issues can increase waiting time and reduce convenience, especially during peak hours.
2	Idea / Solution description	The proposed solution is a ServiceNow-based Metro Ticket Generating System. Passengers select Starting From and Going To stations, choose Single or Return Journey, enter the number of passengers, view the calculated fare, select a payment mode such as UPI or Card, and receive a QR-based digital metro ticket.
3	Novelty / Uniqueness	The system combines ServiceNow Service Catalog functionality, automated fare calculation and QR-based digital ticket generation in one workflow. It provides a simple self-service approach that reduces manual ticketing activities.
4	Social Impact / Customer Satisfaction	The solution improves commuter convenience by reducing waiting time and simplifying ticket booking. Digital tickets reduce paper usage, while QR-based access makes ticket handling easier. Automated calculations also help reduce human errors.
5	Business Model (Revenue Model)	The system is primarily an operational digitalization solution for metro services. Revenue can be supported through normal metro ticket fares and digital payment channels. The solution can also reduce operational and paper-related costs through automation.
6	Scalability of the Solution	The solution can be extended to additional metro stations and routes by maintaining station and fare data in ServiceNow. Future enhancements can include real-time fare/route data, QR validation at gates, notifications, mobile access, WhatsApp integration and integration with metro operational systems.
